

# Template for EIT2014

Bartłomiej Grychtol<sup>1</sup> and Andy Adler<sup>2</sup>

<sup>1</sup>German Cancer Research Center, Heidelberg, Germany

<sup>2</sup>Carleton University, Ottawa, Canada, [info@eit2014.org](mailto:info@eit2014.org)

**Abstract:** The abstract should contain no more than 8 lines of text and describe the main methods and findings. The abstract should contain no more than 8 lines of text and describe the main methods and findings. The abstract should contain no more than 8 lines of text and describe the main methods and findings. The abstract should contain no more than 8 lines of text and describe the main methods and findings.

## 1 Introduction

This is a Word template file to be used for manuscript submissions for the 14<sup>th</sup> International Conference on Electrical Impedance Tomography to be held in Gananoque, Canada on April 24-26, 2014. Please note the general requirements:

- Single page of A4 paper
- All margins at 2 cm
- British English
- Main body should be in 10pt Times font
- Email address of at least one author must be specified as part of the affiliation block

**The program committee requires a full 1 page submission (rather than just a short abstract).**

## 2 Methods

The paper can be prepared in LaTeX or MS Word and submitted as a \*.pdf or \*.docx file. The templates can be downloaded here:

- LaTeX:  
[http://eit2014.org/tmplt\\_latex.zip](http://eit2014.org/tmplt_latex.zip)
- Word:  
[http://eit2014.org/tmplt\\_word.zip](http://eit2014.org/tmplt_word.zip)

Please note that this template makes extensive use of styles that define how text appears. They are named with the pattern EIT2014:xxxxxx. Please only use those styles in your document (as is the case in this template) and do not modify them.

### 2.1 Figures and tables

Figures and tables (floats) can span one or two columns. Note that

1. Two-column floats must be at the bottom of the page.
2. Captions appear below figures but above tables, as in fig. 1 and table 1.

**Figure 1:** Column-width figure.

### 2.2 Equations

Equations should be placed on separate lines and numbered

$$x(t) = s(f_{\omega}(t)) \quad (1)$$

This is somewhat difficult to achieve in Word. First, the equation must be in “display mode”. Then, apply the style EIT2014:Equation. Place a TAB character before and after the equation. You will then be able to type the equation number manually.

#### 2.2.1 References

List and number all references at the end of the paper. The references should be numbered in order of appearance in the document. The reference formats for a journal article [1], a book [2] and conference proceedings [3] are illustrated in the References section.

The format is compact and does not include titles for articles. References in text should be sorted and grouped compactly, as in [1–3]. The easiest way to achieve that in Word is to type do it manually.

## 3 Conclusions

This paper makes many important points.

**Table 1:** This table is placed after the Section Break (Conitunes) at the end of text. This section break ensures the text columns are balanced. This table caption was inserted the usual way, but then had its Style changed to EIT2014:TableCaption to ensure increased spacing above it an decreased spacing below it (after which one has to made the label bold again).
