Parallel imperialist competitive algorithms

[Article](#) [Full-text available](#)

Jan 2018 · Concurrency and Computation Practice and Exp...

The importance of optimization and NP-problem solving cannot be overemphasized. The usefulness and popularity of evolutionary computing methods are also well established...

Nested graphs: A model to efficiently distribute multi-agent systems on HPC clusters

[Article](#)

Jan 2018 · Concurrency and Computation Practice and Exp...

Computational simulation is becoming increasingly important in numerous research fields. Depending on the modeled system, several methods such as differential...

A high-level library for multidimensional arrays programming in computational science

[Article](#)

Jan 2018 · Concurrency and Computation Practice and Exp...

This paper describes ExaShark, a hybrid n-dimensional array toolkit offered as a high-level library for scientists to compute large-scale simulations. It offers a global-array-li...

Analyzing the impact of communication imbalance in high-

speed networks

Article

Dec 2017 · Concurrency and Computation Practice and Ex...

In this work we analyze the communication load imbalance generated by irregular-data applications running in a multi-node cluster. Experimental approaches to diminish...

A LoCATE-based visual place recognition system for mobile robotics and GPGPUs

Article

May 2017 · Concurrency and Computation Practice and Ex...

In this paper, a novel visual Place Recognition approach is evaluated based on a visual vocabulary of the Color and Edge Directivity Descriptor (CEDD) to address the loop...

Semi-asynchronous approximate parallel DEVS simulation of web search engines

Article

May 2017 · Concurrency and Computation Practice and Ex...

Discrete Event System Specification (DEVS) is a formalism for the modeling and analysis of discrete event systems. Parallel DEVS (PDEVS) is an extension of DEVS for...

Real-time surveillance detection system for medium-altitude long-endurance unmanned aerial vehicles

[Article](#)

Mar 2017 · Concurrency and Computation Practice and Exp...

The detection of ambiguous objects, although challenging, is of great importance for any surveillance system and especially for an unmanned aerial vehicle, where the...

Parallel Space Saving on Multi and Many-Core Processors

[Article](#)

Jun 2016 · Concurrency and Computation Practice and Exp...

Given an array of n elements and a value $2 \leq k \leq n$, a frequent item or k -majority element is an element occurring in more than n/k times. The k -majority problem requires finding all ...

An integrated efficient solution for computing frequent and top- k elements in data streams

[Article](#)

Sep 2006 · ACM Transactions on Database Systems

We propose an approximate integrated approach for solving both problems of finding the most popular k elements, and finding frequent elements in a data stream coming from a...

Imperialist Competitive Algorithm: An Algorithm for Optimization Inspired by Imperialistic Competition

Conference Paper Oct 2007

This paper proposes an algorithm for optimization inspired by the imperialistic competition. Like other evolutionary ones, the proposed algorithm starts with an initial...

A Two-Stage Template Approach to Person Detection in Thermal Imagery

Conference Paper Feb 2005

We present a two-stage template-based method to detect people in widely varying thermal imagery. The approach initially performs a fast screening procedure using a...

CEDD: Color and Edge Directivity Descriptor: A Compact Descriptor for Image Indexing and Retrieval

Conference Paper

Full-text available

Jan 2008

This paper deals with a new low level feature that is extracted from the images and can be used for indexing and

retrieval. This feature is called "Color and Edge Directivity...
