A Generic Framework for Computational Spatial Modelling

Article

Oct 2012

Michael Batty

We develop a generic framework for comparing spatial models whose dynamics range from comparative static equilibrium structures to fully dynamic models. In the last 40 years, a variety of spatial models have been suggested. Until the mid 1980s, most models were static in structure and tended to embrac…

This chapter guides the reader to the material in this book. It begins by outlining the meaning and rationale for agent-based models/modelling (ABM), focusing on their history, how they evolved and how they sit within the broader context of modelling and simulation for geographical systems. Three theme…

Spatial Approaches to Modeling Dispersion of Communicable Diseases – A Review

Article

The dispersion of communicable diseases in a population is intrinsically spatial. In the last several decades, a range of spatial approaches has been devised to model epidemiological processes; and they

A New Method of Adaptive Zoning for Spatial Interaction Models

Article

Oct 2012 · Geographical Analysis

Alex Hagen-Zanker · Ying Jin

Spatial interaction models commonly use discrete zones to represent locations. The computational requirements of the models normally arise with the square of the number of zones or worse. For computationally intensive models, such as land usetransport interaction models and activity-based…

Discrete event modeling and massively parallel execution of epidemic outbreak phenomena

Kalyan S. Perumalla · Sudip K. Seal

In complex phenomena such as epidemiological outbreaks, the intensity of inherent feedback effects and the significant role of transients in the dynamics make simulation the only effective method for proactive, reactive or post facto analysis. The spatial scale, runtime speed, and behavioral detail neede…

A Hybrid Epidemic Model: Combining The Advantages Of Agent-Based And Equation-Based Approaches

Conference Paper

Jan 2007 · Proceedings - Winter Simulation Conference

Georgiy V Bobashev · Michael Goedecke · Feng Yu · Joshua M Epstein

Agent-based models (ABMs) are powerful in describing structured epidemiological processes involving human behavior and local interaction. The joint behavior of the agents can be very complex and tracking the behavior requires a disciplined approach. At the same time, equation- based models (EBMs) can b…
