Process mining techniques require event logs which, in many cases, are obtained from databases. Obtaining these event logs is not a trivial task and requires substantial domain knowledge. In addition, an extracted event log provides only a single view on the database. To change our view, e.g., to focus on...

Students' careers analysis: a process mining approach

Conference Paper

Jun 2017

 Marco Cameranesi ·  Claudia Diamantini ·  Laura Genga ·  Domenico Potena

University degrees are typically organized in courses with prerequisites among them. If prerequisite are not mandatory, students are left free to attend courses and take exams in almost any order. While favoring flexible organization of the work by students, this practice can also lead to unstructured learni...

This report demonstrates how storing events in a data warehouse can facilitate mining business process models. The data warehouse is designed based on dimensional modelling principles for the Business Processing Intelligence Challenge (BPIC) 2016, and it is populated by extracting and cleaning,...

Research on heterogeneous data integration model of group enterprise based on cluster computing

Article

May 2016 · Cluster Computing

 Qingyuan Zhou

Cluster, consisting of a group of computers, is to act as a whole system to provide users with computer resources. Each computer is a node of this cluster. Cluster computer refers to a system consisting of a complete set of computers connected to each other. With the rapid development of computer...

The need for usable formal methods in verification and validation

Conference Paper

Dec 2013

 Rajeev Gore ·  Saikou Y. Diallo

The process of developing, verifying and validating models and simulations should be straightforward. Unfortunately, following conventional development approaches can render a model design that appeared complete and robust into an incomplete, incoherent and invalid simulation during implementation. An...
